Thetransportinterfacebuildingwillbe handedover, onceit'sbuilt, totheVianadoCasteloCityHall, thus becomingacityasset.

Maximum security and environmental quality

Benefiting from Sonae Imobiliária's vast know-how in the development of shopping and leisure centres, Estação Viana abides to the company's rigorous demands in terms of comfort, security, integration in the surrounding environment and environmental quality.

For example, the new centre comprises the most sophisticated solutions for such important aspects as the separation and treatment of residues or the monitoring of water and air quality. The centre's energy management and savings system is fully computerized (BMS – Building Management System).

As far as safety is concerned, the Estação Viana will benefit from some of the most modern support systems, such as the automatic fire detection system (SADI), the closed circuit television surveillance system (CCTV), the automatic intruder alert system (SAI), the fire fighting system (RIA) or the access control system.
